

CASCADE COUNTY RURAL ADDRESS SYSTEM AND ROAD ATLAS

The information in this book is a series of road maps of Cascade County, Montana prepared for the purpose of enhancing Public Safety and addressing the rural residences. The road and address information on the maps are collected by City and County employees and volunteers in a cooperative effort with the use of Global Position System (GPS) technology. The maps in the book are copyrighted and may not be reproduced in any manner without expressed written consent of the 9-1-1 Jurisdiction representatives.

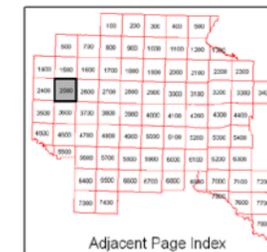

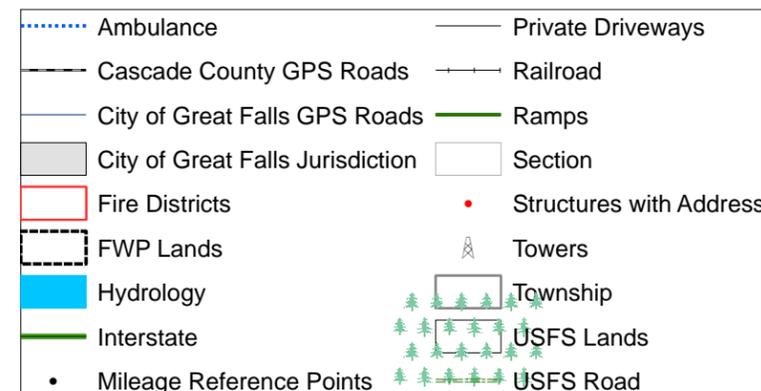

KEY TO ADDRESSING

Rural addressing is accomplished using the system of mile markers set along Federal, State and County roads and highways. At the beginning of a road each mile along the road is indicated. In this book the mile marker is represented in parenthesis (ie...(123)). Houses are addressed based on their distance along the road from the point of beginning. For example:

Note: Houses falling on the east side of north/south tending roads or the north side of east/west tending roads are given odd numbered addresses. Houses are addressed at the point where the private drive intersects with a public road. Private drives or roads with five (5) or more houses are assigned names.

All maps created for this book were done in the State Plane Coordinate System, Lambert Conformal Projection, NAD83 datum, and units of feet.

This index shows which map sheets are adjacent to the map sheet on a particular page. The map numbers are on the bottom right hand corner of each page.

Users of this book are respectfully requested to report any errors or omissions to the Cascade County GIS Division, (406) 454-6727. Comments are encouraged and should improve the accuracy and usefulness of this book. Comments and address changes will be represented in regular updates to this book.

The maps and information set forth in this book are intended for government purposes only. Accordingly, the maps and information contained in this book are not intended for non-governmental use. The maps and information in this book should not be used for non-governmental use without independent verification that the maps and information are true, accurate, and otherwise suitable for the contemplated non-governmental use. Any information represented here is not guaranteed to be accurate, current, or suitable for non-governmental use. No reliance on angles, distances, area sizes or other land survey data should be assumed without verification by the user.
