Great Falls, MT 59401

**Re: Madison Food Park LLC, ("MFP") Special Use Permit ("SUP") Application**  
**Attention: Mr. Brian Clifton, Director of Public Works, Great Falls, Montana**

Dear Mr. Clifton,

We would like to update and inform you that MFP is continuing to assemble information in order to evaluate qualified industry professionals, scientific technologies, robotic systems and the best methods to implement these technologies into our proposed Food Park Campus ("FPC"). In order to maximize the benefit to Montana communities, we will ensure that we minimize the use of natural resources (water), install the most efficient, sensible, scalable and biologically-based nutrient recovery of waste water and employ the best usage of existing infrastructure. We would also incorporate traffic studies and labor market research in the State of Montana. It is important to note that the primary goal of MFP is to establish its facilities with a net positive contribution to the County of Cascade and surrounding communities.

MFP is a small family-owned company recently incorporated in the State of Montana, which does not raise livestock. Therefore, we must align and partner with Montana-based & family-owned ranchers, milk producers, livestock producers and grain growers with similar goals. Those goals are to produce, process and market naturally raised foods for the local, national and foreign marketplace(s), while maintaining Montana's clean air, water and soil. We believe that Montana's economy will greatly benefit with these value-added facilities and processing the livestock and agriculture products right here.

We foresee that this project will take between 7 to 10 years to complete, and we are determined that the development and growth of our contemplated state-of-the-art facilities will be conducted in a responsible and ethical way. This gradual process will enable the County and surrounding communities to absorb, adjust and accommodate the infrastructure demands, with the least amount of interference or negative impact to accustomed lifestyles of local citizens.

We would like to proceed with the SUP amendment(s), however, we insist on being accurate and wish to employ science-based and proven-effective technologies, so that the FPC can be completely developed according to the evolving site plan, with the least amount of negative impact on the environment. Maintaining good stewardship of the building site, surrounding lands and sensitivity to the immediate neighbors is of the utmost importance to MFP.

It is expected that an amendment(s) will follow in the next 180 days approximately, depending on the length of time it takes to receive further information, required for amending the SUP(s).

Sincerely

Edward Friesen

President Madison Food Park, LLC
